

REMARKS

The amendments are essentially formal in nature and update some information in the specification. Previously filed IDSs and concurrently filed Declaration under Rule 132 supplement the USPTO file in this regard.

For an unknown reason, example 8.57 in the initial international publication pamphlet WO2005/066180 showed an incorrect chemical structure. The error is that the side chain corresponding to the R3 group should be iso-butyl but is shown as propyl in the initial publication. The original PCT/GB2005/050003 application as filed contained the correct structure for example 8.57. The apparent printing error is obvious because all the Examples in Table 1 are described just above the table as using the same building block for their right hand side. The UKIPO in their capacity as Receiving Office have acknowledged the printing error and WIPO has republished the application with the correct chemical structure as WO2005/066180 A1 (corrected version).
